# Pivot

Hide and Seek  
Beautifully for The Door

First impression matters, same  
as the pivot door. The heavier  
it gets, the hidden it can be.

## System M+

A fully concealed pivot system engineered for precision motion, System M+ supports doors up to 500 kg with adjustable damping, latch, and 30° speed control for smooth, refined movement.

## System One

Fully hidden within the door, System One supports free-swinging 360° rotation and doors up to 500 kg, offering architects and designers complete motion freedom with quiet precision and long-term durability.

## System 3

Concealed in the door core, System 3 offers 360° free-swing motion with firm 90° hold-open positions—ideal for hidden panels that require controlled stops, clean lines, and enduring reliability.

Project by A+A Architecture Interior  
Pakubuwono Spring, Jakarta

## System FX

Fully concealed within the door, System Fx enables free-swing motion with secure hold-open points every 90°, offering crisp alignment and dependable performance for design-driven openings up to 209kg.

## Konner Axon

A concealed gravity pivot rated to 120 kg, AXON lifts and settles the door through a simple cam mechanism—an economical, reliable choice for everyday openings needing clean installation and consistent self-centering performance.

# KONNER

Engineered Certainty

Precision-crafted with the finest material and tested in toughest conditions. Built to perform and backed by 25 Years Guarantee.
